## Court Dismisses Opposition on GWU Stock

DALLAS, Tex. — A federal court has dismissed an action opposing a preferred stock redemption plan by Great Western United Corp., the company reported.

U.S. District Court in Washington, D.C., dismissed the action. A related action was filed in a Delaware state court, and GWU said it is working toward a settlement there.

The actions have prevented GWU from carrying out the plan approved by stockholders at a meeting Sept. 20. It calls for redemption of GWU's outstanding preferred stock and creation of a new parent company, Hunt International Resources Corp., replacing GWU.

GWU said dividends on its preferred stock "are continuing to accrue" and "will ultimately be paid."

## Crops bringing low prices

County Extension Agent

Sandusky County farmers are satisfied with the yield of crops this year, but discouraged with farm prices.

The crop first harvested was wheat, with the yield about average and the price below the cost of production.

The next crop harvested was pickles, where the yield was above normal. This was followed by cabbage, with yields as high as 40 tons of cabbage

per acre — well above normal.

Sandusky County is the major tomato producing county in Ohio and the yield this year is 21 tons per acre, which is a little below the average yield for the county for the last five years. The 1976 season produced an outstanding harvest of 27.6 tons per acre.

Farmers are satisfied with the soybean yields this year. The yields are five to 10 bushels above normal, but the one

disappointing factor has been the amount of mold in the beans. This has caused some price discounting of early-maturing, early-planted beans at the elevators.

The corn crop looks excellent, both in quality and yield, by reports thus far. With all the rain this summer and fall, stalk rot could become quite a problem and after a good windstorm, many varieties of corn will probably fall. This will make harvest difficult and there will be some harvest losses due to the fallen corn.

The sugar beet is progressing well. The company anticipates one of the highest yields of beets per acre harvested here in the county. The sugar content, though, has been below normal, due to the large amount of rainfall in September and October. The beets tended to grow more than store sugar in the beet. With warm, sunny days, the beet will continue to mature and produce more sugar.
