L. G. Carpenter, Esq.,

Director Experiment Station,
Fort Collins, Colo.

Dear Sir:

We have your favor of the 7th inst., and wish to say that it is perfectly satisfactory to us if your Experimental Station, or your lessors or renters, use the seed furnished by you. We will receive the crop from this seed under the same terms as offered to our other beet growers. We would appreciate it if you would inform us at your earliest convenience how much seed you expect to have, so that our seed orders can be made out and we can make the entries correctly in our books. Should you have sufficient seed for all the beets to be raised at the Experimental Station, we will mark on the contract that no seed will be furnished for this acreage, according to your request. Whenever you run short, we will always be in a position to furnish you the seed required.

We are in the market for seed for 5 acres each of White Lupin, Cowpea (Vigna catiagn) and Rape. Could you advise where we can secure this seed? Do you have any pamphlets referring to the culture of these crops? We expect to raise them for green fertilization.

What is your experience in raising Mexican Beans on new land which has been broken the previous summer or fall? We have several hundred acres of such land and would like to select such crops for some as are best adapted.

Any information you can give us on these subjects will be greatly appreciated.

Yours truly,
American Beet Sugar Co.
