

MR42-13

Yellow Bird Mine (John P. Morris - owner)

Visited deposit with Mr. Morris' brother. A shaft has been sunk about 100' - largely timbered. The mine is in hornblende granite, the only metallic mineral showing on the dump is pyrite. Probably after gold - Mr. Morris' brother claims that gold showings were encountered.

Equipment - air drills and some powder
(Deposit visited with Mr. Morris).

Monte Cristo Mine (John P. Morris - owner)

Visited deposit with Mr. John Morris' brother. A shaft has been sunk about 90'-100' in solid hornblende granite. No molybdenum visible on dump. Mr. Morris reports showings - small occasional stringers - of molybdenite.

(Deposit visited with Mr. Morris.)
