

GEOLOGICAL SURVEY OF WYOMING

R. L. Cunningham Feldspar - Beaver Claim.

Pegmatite Dike. Have gone in about 110 feet. 10'-12' wide and 0-20' high. Considerable quartz with the feldspar. A small amount of biotite. Good-looking microcline.

Went in about 80' in other side of hill on same dike. Good looking spar in bottom of quarry. Large microcline mass 25'x25' connects with one over hill. Looks like a good body in depth.

This is an especially good quality feldspar and can be used for special things like bathroom fixtures, etc. - according to Tom Rees. All of the rest of the spar goes into glass mfg.

Sent to M & S Co. - Denver, Magneson & Son and Western Feldspar Co.

Took out 940 tons in 5 mos. by hand since July 1942.

Regmatite Dike, have gone in about 110 feet -
10-12' wide and 0-20' high. Considerable quartz
with the feldspar. A small amount of biotite.
Good looking microcline - sp

Went in about 80' in other side of hill on same
dike. Good looking quartz in bottom of quarry.
Large microcline near 25' x 25' connects with one
over hill. Looks like a good body in depth.

This is an especially
good quality feldspar and
can be used for several
things, like for the no. 10 feldspar,
etc. - according to Tom. See
all the rest of the feldspar
goes into glass making.

Sent to M & S Co - Denver
Macquesson & Son and
Western Feldspar Co.

Each side 940 tons in ^S \pm more by hand. Since
July 42
