	All information for the project must fit into the space provid	unt / Project Description led below. The review committee will not consider attachments.
	Dollar Amount Requested Way Not Exceed \$4	470 x Number of Acres Proposed For Treatment \$470.00
3	Will this Project be conducted as a Pass-Through (
	identify vegetation types) The proposed project area is located around the monosists of dense ponderosa pine, lodgepole pine many old growth ponderosa which will be protect lessen fuel loading around the structure, as well as	and Douglas-fir. The forested area also includes ted during the project. The overall goal is to

Scope of Work / Project Timeline All information for the project must fit into the space provided below. Attachments will not be considered by the review committee. Provide a brief scope of work that clearly describes how grant funds will be spent. (This should be mors specific than the project description) The primary objective of the project is to reduce hazardous fuels currently present on the site and improve forest health to lessen the impact of bark beetles. The primary management technique will consist of fire thinning mainly targeting the removal of trees that are unhealthy due to insect and disease issues, as well as, creating good canopy spacing between single trees and groupings of trees Reducing ladder fuel will as so be a priority of the project. When possible seedlings and saplings will be retained if located in open areas and not under retained trees. Slash will be dealt with by either piling for burning at a later time, hauled off site, or lopped and scatted throughout the project area. All remaining trees will be limbed up six feet or 1/3 rd of the trees whichever is the less. Describe all planned long-term maintenance (grant funded or other). Landowner will continually monitor project area in future years for insect and disease issues and mitigate any that are located. The landowner will also monitor the area for windthrow that may occur due to the change of density in the stand. What is the duration of this project? (check one)		
Provide a brief scope of work that clearly describes how grant funds will be spent. (This should be mors specific than the project description) The primary objective of the project is to reduce hazardous fuels currently present on the site and improve forest health to lessen the impact of bark beetles. The primary management technique will consist of free thinning mainly targeting the removal of trees that are unhealthy due to insect and disease issues, as well as, creating good canopy spacing between single trees and groupings of trees Reducing ladder fuel will as so be a priority of the project. When possible seedlings and saplings will be retained if located in open areas and not under retained trees. Slash will be dealt with by either piling for burning at a later time, hauled off site, or lopped and scatted throughout the project area. All remaining trees will be limbed up six feet or 1/3 rd of the trees whichever is the less. Describe all planned long-term maintenance (grant funded or other). Landowner will continually monitor project area in future years for insect and disease issues and mitigate any that are located. The landowner will also monitor the area for windthrow that may occur due to the change of density in the stand. What is the duration of this project? (check one) X 1 Year 2 Years 3 Years 4 Years Is this a continuing project from previous year/s? (check one) Yes X No Provide a timeline for the project Project work will begin as soon as possible and will continue through completion, which is targeted for 6/3/2012. Interagency Collaboration Specify the private, local, tribal, county, state, federal and/or non-governmental (591c3) organizations that will contribute to or participate in the completion of this project. Describe briefly the contribution each partner will make (i.e donating time/equipment, funding, etc.). The landowner will him a contractor to complete the mitigation work but will also complete the necessary defensible maintenance around the structure.		aw aammittaa
