Longitude (decimal degrees):	W105 13.043
Threat Description (check all that apply)	
Homes:	<input checked="" type="checkbox"/> Number of: 60
Businesses:	<input checked="" type="checkbox"/> Number of: 5
Watersheds:	<input checked="" type="checkbox"/> Number of: 1
Other (Describe):	

Requested Grant Amount / Project Description	
All information for the project must fit into the space provided below. Attachments will not be considered by the review committee.	
Dollar Amount Requested \$ 17,000	Projected Match \$ 17,000
<p>3 Provide a brief overview of the project and the project area. (If applying for a fuels reduction project, identify vegetation types.)</p> <p>The Whale Rock Road area of Rist Canyon, Larimer County, Colorado, has been identified as one of highest wildfire hazard areas in the Front Range. The area was clear-cut in the early 1900's, and the re-growth of predominantly Ponderosa pine along with wildfire suppression has resulted in extremely high tree densities, with much slash, snags and standing dead wood. The two subdivisions in this area are accessed off Hwy 52E by a single rough narrow road which limits the ability to evacuate and to defend the area from wildfires. Prescribed burning is not an option at this point due to the steep terrain, high fuel load and high housing density. The only way to reduce the chance of a catastrophic wildfire in this area is to reduce the fuel load and create fuel breaks. That is the intention of this proposal. The fuel break proposed is along a particularly vulnerable south facing section and the ability to stop a fire at this juncture could save these subdivisions.</p>	

Scope of Work / Project Timeline	
All information for the project must fit into the space provided below. Attachments will not be considered by the review committee.	
4	<p>Provide a brief scope of work which clearly describes how grant funds will be spent. (This should be more specific than the project description)</p> <p>A 34 acre fuel break averaging 600 feet wide will be created along 1/2 mile of dirt road which flanks the southern side of these two subdivisions. Fuel break boundaries will be marked following CSFS following guidelines (Dennis, 1983). Most of the trees in this area will be removed and dragged by a log skidder to a processing area; firewood-size material will be salvaged and the rest will be chipped. The few trees which remain will be limbed to 12 feet in height to remove ladder fuels and these branches will also be chipped. Brush will be reduced in this break with chainsaw and by hand chopping. Local homeowners will work along with contracted labor to hold total costs down. The Homeowners/Road Associations involved with this project have zero money to spend, but will supply some labor. Local property owners John and Tamera Snyder have committed to supply labor, funds and equipment needed to complete the project.</p>
	<p>Describe all planned maintenance (grant funded or other) if this project is funded.</p> <p>The fuel break area will be regularly thinned of brush by local homeowners. The few remaining trees will require no maintenance other than occasional removal of dead wood. This will not be labor intensive, and no additional funds will be required for this. The incentive to maintain this area as a fuel break is great among local property owners.</p>
	<p>What is the duration of this project? (check one) <input checked="" type="checkbox"/> One Year <input type="checkbox"/> Two Years</p>
	<p>Is this a continuing project from previous year/s? (check one) <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p>
	<p>Provide a timeline for the project</p> <p>March 1, 2006 - mark firebreak boundaries and stage chipping areas. Hire labor and line up additional equipment rentals if needed.</p> <p>March 7, 2006 - have RCVFD personnel video document pre-fuel reduction condition of site.</p> <p>March 15, 2006 - commence fuel reduction work.</p> <p>December 1, 2006 - anticipated completion date.</p> <p>December 1, 2006 - have RCVFD personnel video document post- fuel reduction condition of site.</p>

Interagency Collaboration	
5	<p>Specify the private, local, tribal, county, state, federal and/or non-governmental (501c3) organizations that will contribute to or participate in the completion of this project. Describe briefly the contributions each partner will make (i.e. – donating time/equipment, funding, etc.).</p> <p>Colorado State Forest Service and Larimer County Wildfire Safety Program will provide guidance.</p> <p>Mountain Estates and Saddle Ridge Road Associations will provide labor.</p> <p>Rist Canyon Volunteer Fire Department will document the effort for community ed.</p> <p>Scott Golden of Silva Logic is the most likely contractor, if available, for providing and operating equipment.</p> <p>John and Tamera Snyder will provide labor and a John Deere log skidder and a Vermeer brush chipper at no cost except fuel requirements.</p>
Community Wildfire Protection Plan (CWPP)	

	Does this community have a wildfire protection plan that follows the Healthy Forest Restoration Act CWPP guidelines? (check one) <input type="checkbox"/> yes <input checked="" type="checkbox"/> no <input checked="" type="checkbox"/> in development		
	Is this project part of the plan? (check one) <input type="checkbox"/> yes <input type="checkbox"/> no		
	A copy of the plan (final, draft, or proposed outline) must be submitted with this application.

Community Wildfire Protection Plan for Mountain Estates and Saddle Ridge Estates Subdivisions, Larimer County, Colorado-

Outline

Note: This is a rough draft of a CWPP for these two subdivisions.

1. Participants:

- Mountain Estates and Saddle Ridge Estates Road Associations.
- Rist Canyon Volunteer Fire Department.
- Colorado State Forest Service.
- Local property owners.

2. Activities:

- Road Association meetings will be used to coordinate activities and to rally property owner participation.
- Rist Canyon Volunteer Fire Dept. Will develop egress plan and make recommendations to reduce structure fire hazard.
- Colorado State Forest Service will develop overall CWPP.

3. Definition of the community's wildland-urban interface:

- See attached maps. First map show approximate location of the two subdivisions in Larimer County. Second map shows the road system and the rough boundaries of the subdivisions.

4. Community's preparedness to respond to wildland fire:

- Currently the community preparedness for wildland fire is low. The local volunteer fire department is well trained and equipped, but this particular are is hampered by poor egress, extreme fuel loads and lack of property owner involvement and awareness.

5. Community risk analysis:

- Fuel hazards and risk of wildfire occurrence are extreme in this area.
- Approximately 60 homes are threatened
- Approximately 100 persons are at risk

6. Identification of fuels treatment priorities:

- Better emergency access to area via road widening and marking.
- Establishment of defensible spaces and fire breaks.

- Community access to equipment for fire mitigation work (example - log skidder and brush chipper).
- Method of treatment mainly is mainly cut and chip or slash pile burning - prescribed burns are not viable in this area.

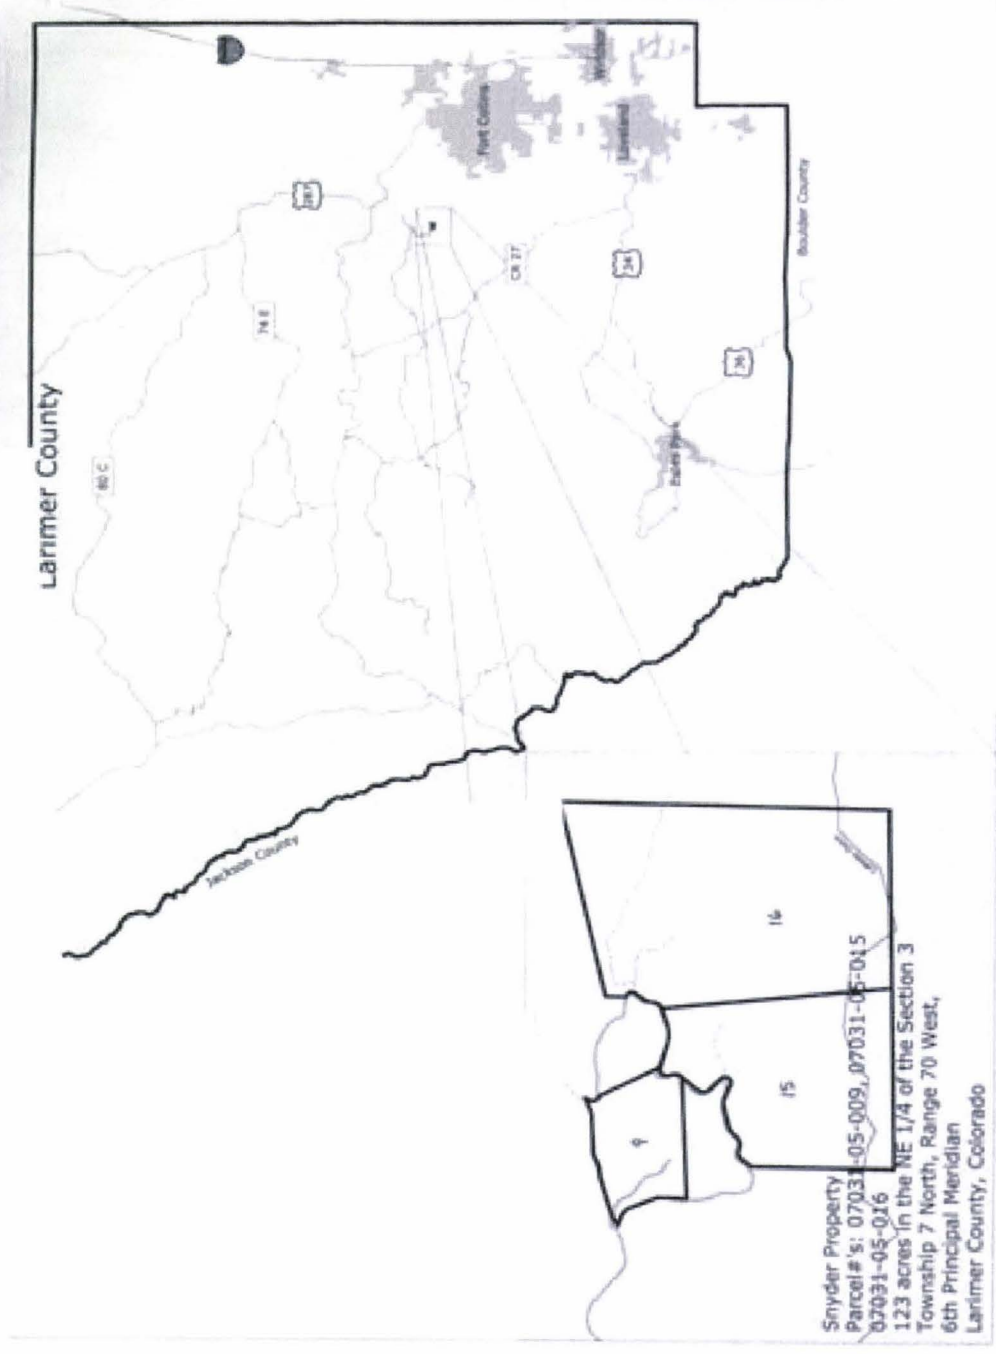

7. Recommendations regarding ways to reduce structural ignitability.

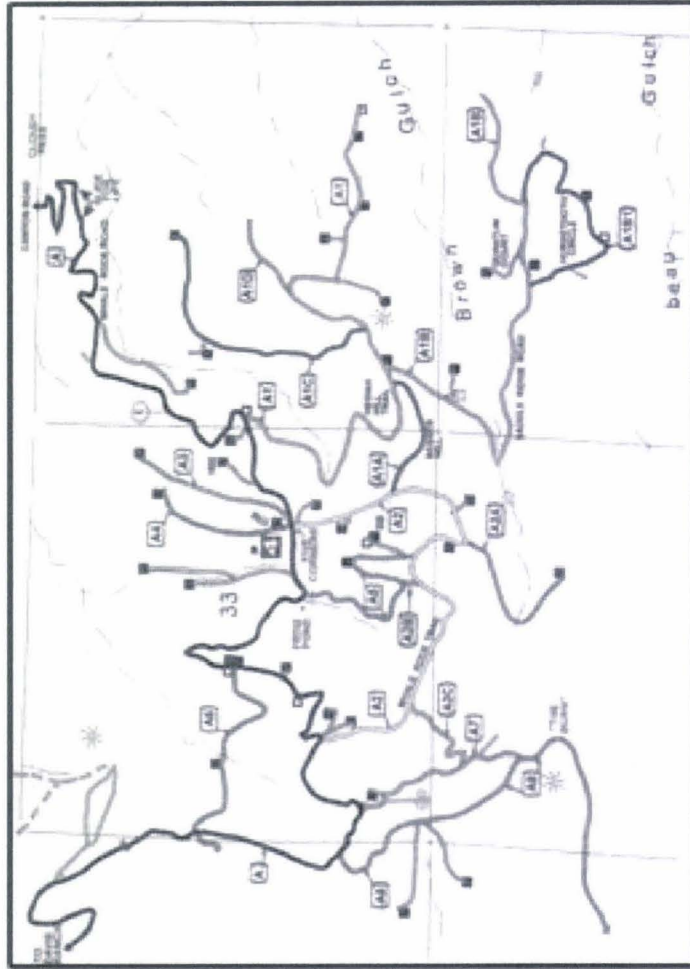

- Defensible space
- Building and retrofitting with fire resistant products
- Fire retardant use on structures

8. Implementation

- In progress - Forest Stewardship plans have been already developed for several properties within these subdivisions and these will be incorporated into the final implementation. Individual property owners have created defensible spaces and these need to be coordinated.

Hello John!

The good news is that your 2004 project proposal for the fuelbreak work was funded for \$18,000. The bad news is that.....well we could have done better communicating with you. The short answer is that these sub-award grants are administered through the University's Office of Sponsored Programs (OSP). OSP said that since you are an individual (vs. a subdivision) that they weren't going to send a sub-award to you and that we could fund your project with our CSFS Landowner Assistance Program. Anyways, you can consider yourself approved for an \$18,000 grant towards the \$36,000 fuel break project. We can now proceed. Here are the steps.

- + The LOA Application is attached for your signature (in the 'Snyder
- + 2004 Cost-Share Application.doc' attachment). This will be the equivalent of the sub-award from OSP. Sign that and send it back to me. You can start any time after signing the LOA Application.
- + I set a date of 9/30/06 as the completion date. Let me know if that's a problem.
- + Any reference in the LOA materials to a 'management plan' will be
- + covered under your 2004 Forest Stewardship Plan and your 2004 grant
- + application. The other files attached are about the LOA procedures,
- + documentation of costs, and accomplishment reporting.

Please call if you have any questions. My cell phone number is 222-8693.

Thanks for your patience!

Boyd Lebeda

John,

Thank you for your grant application.

It was particularly timely because I was visiting with the Fort Collins District Forester this morning about grants. In reviewing our spreadsheets I discovered that I had dropped the ball in implementing a new awards process last year and that we do have funding set

aside for the grant you applied for last year. My mistake and I apologize for any inconvenience.

You would have been hearing from Boyd Lebeda, Fort Collins District Forester soon, but this email will probably speed up the contact.

I have done a very quick review of your draft plan and believe it has good potential to address community wildfire protection in your area with a few additions. I would suggest involving USFS personnel in the process and also identifying USFS property (if any) close to your community that may increase fire protection if the fuels were treated. I'm sure Boyd will be available to assist you with the development of the plan.

I'm forwarding your documents to Boyd and asking him to contact you soon.

Rich Homann

Subject: 2006 Colorado Wildland Urban Interface Grant

To Rich Homann:

Attached is the grant application in MS Word Format. Please note that my wife and I are assuming financial responsibility for this project as our road associations have no money to spend. Local road association members will provide some labor. My wife is a member of the Rist Canyon Volunteer Fire Department and we are the lead people up here in fire mitigation work. It has been difficult to get other people in this area motivated towards fire mitigation, and we hope this project could jumpstart community involvement. Please let me know if you need any more information, and please keep me posted as to the status of this grant application.

Thank you

John Snyder

Project Summary			
5	Primary Project Type	Y or N	Units of Measure
	Assessment/Scoping:	N	Number
	Planning:	N	Unit
	Information/Education:	N	
	Implementation/Treatment:	Y	30
	Monitoring/Evaluation:	N	Acres
Project Description:			
Is this a continuing project from previous year/s: YES N			
<p>Briefly identify accomplishments, including Units of Measure:</p> <p>Have heavily thinned 13 acres of adjoining forest on the south side of these two subdivisions reducing tree density to approx. 25% of the pre-thinned density.</p> <p>How will you mitigate the threats checked in Block 3?</p> <p>The proposed 30 acre fuel break area flanks the south and east boundaries of two subdivisions. The fuel break will link areas which have previously been thinned to provide a much larger reduced fuel break on the crest of a particularly vulnerable slope, where under current conditions a ground fire racing down a grassy slope would likely become a crown fire as it encountered the dead and low growing trees approaching the crest. This proposed fuel break would help keep the fire on the ground and provide a defensible border. The thinning will follow the FireWise and CSFS standards (as per Dennis, 1983) for fuel breaks. All slash will be chipped.</p> <p>Give a brief description of the project steps and activities to achieve objectives.</p> <p>Fuel break boundaries will be marked following CSFS following guidelines (Dennis, 1983). Final fuel break will be awarded to thin fuel break and to chip resulting slash. Local homeowners will work along with contractors to hold total costs down. Work will commence as soon as this grant is approved.</p> <p>Time-line for meeting the steps listed above. Include major milestones, accomplishments and completion date.</p> <p>Jan 1, 2004 - Finalize forest management plan incorporating fuel break. Feb 1, 2004 award contract for tree removal and chipping. March 1, 2004 commence work. Nov 1, 2004 complete work.</p>			
Contributors			
6	<p>Name the private, local, tribal, state, and/or federal organizations that are contributing or participating in getting the project done.</p> <p>Colorado State Forest Service; Larimer County Wildfire Safety Program; Mountain Estates and Ridge Road Associations; Scott Golden (Silva Logic); John Snyder; Tamara Snyder</p>		

7	Estimated Total Project Cost
	Estimate the total cost of completing the project. Include all funds (federal, state, local, private actual dollars and the value of gifts, supplies, materials, volunteered services, or in-kind match \$40,000. 00 _____

8	Project Revenue (How will be project be funded?)			
	Grant Request (List Below)	Other Funds (List Source in columns to right)	Snyders	
		Dollars (Hard Match)	12,000	
		In-Kind (Soft Match)	8,000	
		Total Match	20,000	
	Application will be disqualified with insufficient match identified (Federal dollars do not qualify)			

9	Project Expense (How will funds be spent?)					
	(List Source in columns to right)	Grant	Snyders			
	Cooperators Salary/ Wages/Benefits	5,000	8000			
	Operating Expenses	500				
	Contractual Services	14,500	12,000			
	Capital Expenses					
	Indirect Costs					
	Total	20,000	20,000			

10	Additional Comments
	The Whale Rock Road area of Rist Canyon, Larimer County, Colorado, has been identified as highest wildfire hazard areas in the Rocky Mountains. We have two subdivisions nestled in ve forest. The area was clear-cut in the early 1900's, and the re-growth of predominantly Ponder along with wildfire supression has resulted in extremely high tree densities, with much slash, s standing dead wood. The fire hazard has been extreme during the prolonged drought we are experiencing, with red flag days being common. In addition, the narrow, steep, single access i these subdivisions limits the ability to evacuate and to defend the area when a wildfire does hi Prescribed burning is not an option at this point due to the steep terraine, high fuel load and hig density. The only way to reduce the chance of a disasaterous wildfire in this area is to reduce load and create fuel breaks. That is the intention of this proposal.
