Requested Grant Amount / Project Description	
All information for the project must fit into the space provided below. The review committee will not consider attachments.	
<b>Dollar Amount Requested May Not Exceed \$470 x Number of Acres Proposed For Treatment</b>	
Dollar Amount Requested	\$2,820.00
Will this Project be conducted as a Pass-Through Grant? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Provide a brief overview of the project and the project area. (If applying for a fuels reduction project, identify vegetation types)	
<p>The proposed project area is located around the main structure on the property. The forest type consists of dense ponderosa pine, lodgepole pine and Douglas-fir. The forested area also includes many old growth ponderosa which will be protected during the project. The overall goal is to lessen fuel loading around the structures, as well as, promote forest health. They also hope to use their property as a show place when the work is completed in order to encourage other landowners to do the same.</p>	

### Scope of Work / Project Timeline

All information for the project must fit into the space provided below. Attachments will not be considered by the review committee.

**Provide a brief scope of work that clearly describes how grant funds will be spent. (This should be more specific than the project description)**

4

The primary objective of the project is to reduce hazardous fuels currently present on the site and improve forest health to lessen the impact of bark beetles. The primary management technique will consist of free thinning mainly targeting the removal of trees that are unhealthy due to insect and disease issues, as well as, creating good canopy spacing between single trees and groupings of trees. Reducing ladder fuel will as so be a priority of the project. When possible seedlings and saplings will be retained if located in open areas and not under retained trees. Slash will be dealt with by either piling for burning at a later time, hauled off site, or lopped and scatted throughout the project area. All remaining trees will be limbed up six feet or 1/3<sup>rd</sup> of the trees whichever is the less.

**Describe all planned long-term maintenance (grant funded or other).**

Landowner will continually monitor project area in future years for insect and disease issues and mitigate any that are located. The landowner will also monitor the area for windthrow that may occur due to the change of density in the stand.

**What is the duration of this project? (check one)**  1 Year  2 Years  3Years  4 Years

**Is this a continuing project from previous year/s? (check one)**  Yes  No

**Provide a timeline for the project**

Project work will begin as soon as possible and will continue through completion, which is targeted for 6/1/2012.

### Interagency Collaboration

**Specify the private, local, tribal, county, state, federal and/or non-governmental (501c3) organizations that will contribute to or participate in the completion of this project. Describe briefly the contributions each partner will make (i.e. – donating time/equipment, funding, etc.).**

5

The landowners will complete the mitigation work themselves and could possibly hire a contractor if the need arises. They also plan to use any wood products produced from the project to heat their home.

### Community Wildfire Protection Plan (CWPP)

**Does this community have a wildfire protection plan that follows the Healthy Forest Restoration Act CWPP guidelines? (check one)**  yes  no

**Is this project part of the plan? (check one)**  yes  no

Project Category (check all that apply and answer related questions)			
Hazard Fuels Reduction X Other Forest Management Treatment X
