Transcription of Video 3 Mild behavior score, 2021

Collection: 2020- (10217/182111)

Title: Video 3 Mild behavior score

Date: 2021

File Name: Video 3 Mild behavior score .mp4

Date Transcribed: November 2024

Transcription Platform: Konch AI

BEGIN TRANSCRIPTION

[00:00 - 00:38] Horse trainer: This mare displays a mild behavior score. There is minimal to no reaction to the initial touching or palpation from the pole to the scapula. She displays mild reaction to palpation of the spinous muscle at the level of C2. She also shows reactivity to palpation of the proximal brachiocephalicus muscle, by tossing her head, and her eyes and muzzle become tense. There is minimal muscle reaction to palpation of the triceps or deltoid muscle groups. The trapezius muscle has normal tone and texture. The longissimus muscle is mildly hypertonic, while the middle gluteal muscle palpates within normal limits. Palpation of the origin of the semitendinosus muscle induces a mild response.
