

1998

LOCATION	BLOCK	TRANSECT	PLANT	CULM LENGTH	# SEED HEADS	CULM WEIGHT	# SEEDS	SEEDS WEIGHT	# CULMS
----------	-------	----------	-------	-------------	--------------	-------------	---------	--------------	---------

## LABELING

SP = Seed Production

ESA = Location

B1 = Block #

7 = Transect

P2 = Plant #

All Labeling the same for Biomass & Inflorescence  
only Biomass will be labeled biomass.

## (9) 10 Locations

ULM } 3 blocks at each location  
34 transects at each block  
8 plants along each transect.  
should be approx 960 envelopes } For Inflorescence/culm

## Biomass - 10 Locations

10 plants each location } 100 Biomass

## Steps for culm Inflorescence:

1. Meas. culm length in mm

if 2 inflorescences  
meas. to top of base  
seed head.

#2. Weigh out sample

- record wt &amp; # of culms

#3. save inflorescence.

#4. Label envelope with (U) & cut inflore off & put back in envelope & save for seed extraction,  
- seed wt. later.

1. Biomass envelopes all labeled as biomass.

Biomass 2. separate between old dead = gray color  
- throw out old dead  
3. save the rest & put back in envelope.  
- any green (living) mat. } save  
- yellow material }

## 10 Locations

• ESA

• HG (Heavy Grazed)

• UG &amp; GS (grazing strip)

• Met Station - UG

• Met Station - GS

• 2 IN - Grazed

• 2 IN - ungrazed

• Owl Creek

• 24 Double cantera

• 2 IN GZ

• 2 IN UG

• 23 ESE

• OC

• Sec 25
