

2001

| LOCATION | BLOCK | TRANSECT | PLANT | CULM LENGTH | # SEED HEADS | CULM WEIGHT | # SEEDS | SEEDS WEIGHT | # CULMS |
|----------|-------|----------|-------|-------------|--------------|-------------|---------|--------------|---------|
|----------|-------|----------|-------|-------------|--------------|-------------|---------|--------------|---------|

LABELING

SP = Seed Production

ESA = Location

B1 = Block #

7 = Transect

P2 = Plant #

All Labeling the same for Biomass & Inflorescence
only Biomass will be labeled biomass.

(9) 10 Locations

3 blocks at each location

3 transects at each block

8 plants along each transect.

should be approx 960 envelopes

For Inflorescence/culm

Biomass - 10 Locations

10 plants each location

100 Biomass

Steps for culm Inflorescence:

1. meas. culm length in mm

if 2 inflorescences
meas. to top of base
seed head.

#2. Overweight out sample

- record wt & # of culms

#3. save inflorescence.

#4. Label envelope with (4) & cut inflore off & put back in envelope & save for seed extraction,
- seed cut, later.

1. Biomass envelopes all labeled as biomass.

2. separate between old dead = gray color

- throw out old dead

3. Save the rest & put back in envelope

- any green (living) mat. } save
- yellow material }

10 Locations

• ESA

• HG (Heavy Grazed)

• 4G & 6G (grazing strip)

• Met (station) - 4G

• Met (station) - 6Z

• 2IN - Grazed

• 2IN - ungrazed

• OW/Creek

• 24 Double cantera

• 2INGZ

• 2INUG

• 23 ESE

• OC

• SEC25
