LABELING

SP = Seed Production

ESA = Location

B1 = Block #

7 = Transect

P2 = Plant #

All Labeling the same for Biomass & Inflorescence.
only Biomass will be labeled biomass.

(9) 10 Locations

3 blocks at each location

3 transects at each block

8 plants along each transect.

should be approx 960 envelopes

For Inflorescence/culm

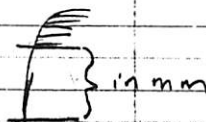

Biomass - 10 Locations

10 plants each location

100 Biomass

Steps for culm Inflorescence:

1. meas. culm length in mm

if 2 InFlor.
meas. to top of base
seed head.

#2. Weigh out sample

- record wt & # of culms

#3. save inflorescence.

#4. Label envelope with W & cut InFlor off & put back in
envelope & save for seed extraction,
- seed wt. later.

1. Biomass envelopes all labeled as biomass.

2. separate between old dead = gray color

- throw out old dead

3. save the rest & put back in envelope.

- any green (living) mat. } save
- yellow material }

10 Locations

• ESA

• HG (Heavy Grazed)

• LG & GS (grazing strip)

• Mat Station - LG

• Mat Station - GZ

• 2 IN - Grazed

• 2 IN - Ungrazed

• Owl Creek

• 24 Double cantera

• 2 IN GZ

• 2 IN LG

• 23 ESE

• OC

• RDC

• Sec 25
