

1996

LOCATION	BLOCK	TRANSECT	PLANT	CULM LENGTH	# SEED HEADS	CULM WEIGHT	# SEEDS	SEEDS WEIGHT	# CULMS
----------	-------	----------	-------	-------------	--------------	-------------	---------	--------------	---------

## LABELING

SP = Seed Production

ESA = Location

B1 = Block #

7 = Transect

P2 = Plant #

All Labeling the same for Biomass & Inflorescence.  
only Biomass will be labeled biomass.

## (9) 10 Locations

ULM

3 blocks at each location

3 # transects at each block

8 plants along each transect.

should be approx 960 envelopes

For Inflorescence/culm

## Biomass - 10 Locations

10 plants each location

100 Biomass

## Steps for culm &amp; inflorescence:

1. meas. culm length in mm

if 2 inflorescences  
meas. to top of base  
seed head.

#2. weigh in/out sample

- record wt &amp; # of culms

#3. save inflorescence.

#4. Label envelope with (4) & cut inflorescence off & put back in envelope & save for seed extraction,  
- seed cut. later.

1. Biomass envelopes all labeled as biomass.

Biomass

2. separate between old dead = gray color

- throw out old dead

3. save the rest &amp; put back in envelope.

- any green (living) mat. } save  
- yellow material }

## 10 Locations

• ESA

• HG (Heavy Grazed)

• UG &amp; GS (grazing strip)

• Mat Station - UG

• Mat Station - GZ

• 2 IN - Grazed

• 2 IN - ungrazed

• Owl Creek

• 24 Double cantena

• 2 IN GZ

• 2 IN UG

• 23 &amp; 35

• OC

• RDC

• Sec 25
