

October 16, 1995

Deb,

Just a few notes to go with Seed Production data from 1991 and 1992:

1991 Seed Production

*** 1991 Seed Production lab work was done by previous workers. We did computer work and made comments where information was duplicated or left out, but we did not attempt to solve problem matches between field data and lab data.

*** # inflorescences (recorded in field) and # culms (recorded in lab) occasionally do not match; this accounts for most of the mismatching in the file. Both columns were left in the file, so that you could match up data or exclude it.

1992 Seed Production

*** Most data matches up well.

*** There are some ID's attached to lab measurements that might be missing Block, Transit and/or Plant numbers. Some of these look like they might match up to plants from the field that have no matching lab data.

1993 and 1994 Seed Production

*** Data will be finished soon. As soon as each set is completed, I'll bring the data to you.

Please let me know if everything looks OK, or if we need to make any changes in our methods.

Thanks,
