PARTIAL BIBLIOGRAPHY ON CONTENTS OF

A. G. U. TRANS. FROM 1935 - 1952

WITH EMPHASIS ON HYDRAULICS AND SEDIMENTATION

BY

A. R. Chamberlain

Partial Bibliography on Contents of
A. G. U. Trans. from 1935 - 1952
with Emphasis on Hydraulics & Sedimentation

A. R. Chamberlain

January, 1954

American Geophysical Union

1935 Hydrology

The flow of water in thin sheets.   M. R. Lewis & E. H. Neal. pp 454.

Outline of the energetics of stream-transportation of solids.   Howard L. Cook. pp 456.

Some observations of sorting of river sediments.   L. G. Straub. pp 463.

Diversity of currend-direction and load-distribution on stream beds. Henry M. Eakin. pp 467.

Some relationships between slope-length, surface runoff, and the silt load of surface runoff.   G. W. Musgrave. pp 472.

Distribution of silt in open channels.   J. E. Christiansen. pp. 478.

Models of estuaries.   Morrough P. O'Brien. pp 485.

Evaporation from large water-surfaces based on records in California and Nevada. T. S. Harding pp 507.

The relationship between the lowering of the piezometric surface and the rate and duration of discharge of a well using ground water storage. Charles V. Theis. pp 519.

1936 Hydrology

Max. ground water levels.   Robert E. Horton. pp 344.

The seepage of water through porous media under the action of gravity. Morris Muskat. pp 391.

Natural stream channel storage.   Robert E. Horton. pp 406.

Evaporation computed by the energy equations.   R. E. & R. W. Kennedy.

Notes on the transportation of silt by streams.   Morrough P. O'Brien. pp 431.

Experimental study of the scour of a sandy river bed by clear and muddy water.   Chilton A. Wright. pp 439.

Suspended matter in the Colorado River, 1925 - 1935. C. S. Howard. pp 446.

Suspended matter in several small streams.   S. K. Love.
        pp 447.

Water intake of saturated soils.   W. C. Lowdermilk.
        pp 355.

The rate of infiltration of water in irrigation practice.
        M. R. Lewis.   pp 361.

Determination of infiltration capacity for large drainage
        basins.   Robert E. Horton.   pp 371.

A graphic method of routing floods through reservoirs.
        R. S. Goodridge.   pp 433.

Natural stream-channel storage.   Robert E. Horton.   pp 440.

Bed load transportation and the stable channel problem.
        Sam. Skulits and W. E. Corfitzen.   pp 456.

The vertical distribution of velocity in wide rivers.
        Morrough P. O'Brien.   pp 467.

The reliability of rainfall intensity-frequency determinations.
        C. W. Thornthwaite.   pp 476.

1938 Hydrology

Flood control.   Leonard B. Chambers.   pp 640.

The effect of silt-removal and flow-regulation on the
        regime of Rio Grande and Colorado Rivers.
        J. C. Stevens.

1939 Hydrology

Symposium on floods.   pp 143.

The functions of debris - dams and the loss of reservoir
        capacity through silting.   E. C. Kenyon, Jr.,   pp 16.

Silt problems of the west.   J. C. Stevens.   pp 26.

1940   Hydrology

The probability-viewpoint in hydrology. Eugene L. Grant.
pp 7.

Ground water, salt water infiltration, and ground-surface
recession in Santa Clara Valley.   C. F. Tolman and
J. F. Poland. pp 23.

Interpretation of ground-water elevation measurements.
C. N. Johnston & M. R. Huberty. pp 53.

The use of hydraulic models in the design of suspended load
samplers. J. Pat. O'Neill. pp 78.

Salt water intrusion in the Connecticut River.   C. S. Howard
pp 455.

Salinity movement and its causes in the Delaware River
estuary.   W. D. Mason and W. H. Pietch. pp 457.

The contamination of ground-water by salt water near Parlin,
New Jersey.   Henry C. Barksdale. pp 471.

Predicting headwater river-stages directly from rainfall.
Franklin F. Snyder. pp 485.

The evaporation equations and their practical application.
N. W. Cummings. pp 512.

The infiltration-theory of surface runoff. R. E. Horton.
pp. 541.

Derivation of infiltration-capacity from average loss rates.
Leroy K. Sherman. pp 541.

On the flow of water in an elastic artesian aquifer.
C. E. Jacob.

Artificial Drainage of Land. Stream-line experiments. The
Artesian basin.   Don Kirkham. pp 581.

A criterion for instability of flow in steep channels. G. H.
Keulegan & G. W. Patterson. pp 594.

Graphical integration of the flood wave equations.   Harold
A. Thomas. pp 596.

A rating-curve method for determining silt discharge of
streams. F. B. Campbell and H. A. Bauder. pp 603.

A study of sedimentation in a Miami conservancy district
reservoir. E. W. Lane and J. C. Kennedy. pp 607.

Suspended material transportation under non-equilibrium
conditions. A. A. Kalinske.

Determination of Manning's n from vertical velocity
distribution curves. W. B. Langbein.

*A distinction between bed-load and suspended load in
natural streams. H. A. Einstein, Alvin G. Anderson,
& Joe W. Johnson. pp 628.

The different approaches to the study of propulsion of
granular materials and the value of their coordination.
Paul Nemenyi. pp 633.

The theory of ground-water motion. M. King Hubbert.
pp 648.

New curve fitting method for analysis of flood records.
John C. Geyer. pp 660.

1941

Engineering calculations of suspend   sediment.
E. W. Lane and A. A. Kalinske. pp 603.

Some experiments on the transportation of suspended load.
Vito A. Vanoni. pp 608.

The effect of a well on the flow of a nearby stream.
C. V. Theis. pp 734.

A proposed method for calculating stream flow.
O. E. Guthe. pp 799.

Basic aspects of stream-meanders. Gerald H. Matthes.
pp 632.

The heat balance method for determination of evaporation
from water surfaces. Benjamin Holzman. pp 655.

Application of the infiltration theory to engineering
practice. L. K. Sherman and L. C. Mayer. pp 666.

1942

Experimental evidence on the effect of suspended sediment on
flow characteristics. Vito A. Vanoni. pp 60.

Sediment loads in the Moore Creek Drainage Basin Idaho.
S. K. Love and P. C. Benedict. pp 652.

Island forming and channel filling on the Upper Wabash River.
Gunnar M. Brune. pp 657.

The use of moss curves in evaluating suspended load
observations on small seedmont streams. J. W.
Johnson. pp 664.

Distribution of suspended sediment in a natural stream.
Alvin G. Anderson. pp 678.

1943   Hydrology

The relation of raindrop size to intensity. J. Otis Laws
and Donald A. Parsons. pp 452.

Comparison of f - curves derived by the methods of
Sharp and Holtan and of Sherman and Mayer.
L. K. Sherman. pp 465.

Heavy minerals in sediment transportation studies.
Gordon Rittenhouse and E. M. Thorp.

Experiments on eddy-diffusion and suspended material
transportation in open channels.   A. A. Kolinske
and C. L. Pien. pp 530.

Flow of fluids through granular material. Loranus D. Hatch.
pp. 536.

A method for determining transmissitulaty and storage
coefficients by tests of multiple well systems.
L. K. Wenzel and A. L. Greenlee. pp 547.

A frequency method of evaluating ground-water levels.
Lyman C. Huff. pp 573.

On the use of a radioactive tracer method in measurement
of water. V. F. Hess. pp 587.

1944

A new method of sediment transportation.   E. W. Lane.   pp 900.

Movement and deposition of sediment in the vicinity of
debris-barriers.   J. W. Johnson and W. L. Minaker.
pp 901.

Rectangular artificial roughness in open channel.
J. W. Johnson. pp 906.

Well discharge: A method of computing the quantity of
water derived from storage within a given radius
of a discharging well. L. K. Wenzel and R. G.
Kozmann. pp 940.

Spatially variable discharge over a sloping plane.
G. H. Keulegan. pp 956.

The surface profile of overland flow. C. E. Izzard. pp 959.

Accuracy of stream flow records. G. K. Wood. pp 985.

Estimation of stream flow from alkalinity determinations.
Arno T. Lenz and Clair N. Sawyer. pp 1005.

Checking runoff by use of inflow and outflow volumes.
Arno T. Lenz. pp 1011.

1945

Application of statistical theory to velocity and
suspended sediment measurements in rivers.
A. A. Kalinske. pp 261.

Prevention of seepage in foundation for dams. Rush T. Sill
and Donald M. Baker. pp 269.

Artificial drainage of land: Streamline experiment.
Don Kirkham. pp 393.

Surface runoff and infiltration. H. A. Einstein. pp 431.

1946

Soil permeability as a criterion for drainage design.
V. S. Aronouici and W. W. Donnan. pp 95.

The reliability and usefulness of the energy equations
for evaporation. N. W. Cummings. pp 81.

Retardance coefficients for low flow in channels lined
with vegatation. Vernon J. Palmer. pp 187.

Radial flow in a leaky artesian aquifer. C. E. Jacob. pp. 198.

A generalized graphical method for evaluating formation
constants and summarizing well field history.
H. H. Cooper, Jr., and C. E. Jacob. pp 526.

Notes on flow-time effects in the great artesian aquifers
of the earth. P. Wilk Werner. pp 687.

On the logarithmic probability law. A. A. Kalinske.

Notes on determining the effective distance to a line of
recharge. Rapheal C. Kazman. pp 854.

Backwater curve. A. Putman. pp 860.

1947

Effect of removal of stream bank vegetation upon water
yield. Earl G. Punford and P. W. Fletcher. pp 105.

Flood routing device. I. H. Steinberg. pp 247.

Macroturbulence in natural stream flow. Gerard H. Matthes.
pp 255.

A basis for unified flood control operation of reservoir
systems. C. O. Clark. pp 573.

Movement of sediment as bed load in rivers. A. A. Kalinske.
pp 615.

A method of estimating sediment accumulation in stock ponds.
L. C. Gottschalk. pp 621.

Suspended matter sampling and current observations in the
vicinity of Hunter's Point, San Francisco Bay.
J. A. Putman, K. J. Bermel, J. W. Johnson. pp 742.

Transverse distribution of suspended sediment below river
confluences. Albert E. Coldwell. pp 747.

1948

Notes on the design of current meters. M. P. O'Brien and
R. C. Folsom. pp 243.

Effect of water temperature on flow of a natural stream.
Wm. S. Eisenlahr., Jr. pp 240.

Unsteady flow in open channels.   Henri J. Putnam.

Movement of beach sands by water waves.   Hans Albert
     Einstein. pp 653.

Model studies made at the University of California River
     and harbor laboratory.   J. W. Johnson.   pp 107.

1949

The dissipation of wave energy by bottom friction.   J. A.
     Putnam and J. W. Johnson.   pp 67.

Recovery of ground-water supplies by pumping from water
     table pools. Henry N. Holberg and Calude M. Roberts.
     pp. 283.

Unsteady flow in open channels.   Pin-Nam Lin and Henri J.
     Putnam. pp 302.

The tide in the David Taylor Model Basin.   W. B. Zerbe.
     pp 357.

A comparison of the sediment loads carried by the Missouri
     and Upper Mississippi Rivers. Gunnar M. Brune.
     pp. 396.

Solids in stream flow.   Gerard A. Matthes.   pp 421.

Scale effects in hydraulic models involving wave motion.
     J. W. Johnson. pp 517.

*A manometric settling velocity tube.   Martin Mason.   pp 533.

Computing soil temperature.   Walter Langbein.   pp 543.

Measurement of ocean waves.   R. G. Folsom.   pp 691.

Resistance to flow in smooth channels.   Ralph W. Powell.
     pp. 875.

1950

Effects of particle shape on settling velocity at low
     Reynolds numbers.   John S. McNown and Jamil Molaika.
     pp. 74.

Pulsational transport of sand by shore agents.   W. C.
     Krumbein and L. E. Ohsiek. pp 216.

Infiltration and retention tests as related to spillway
design floods. Paul Leatham and H. S. Riesbol.
pp 234.

Critical escape velocity for a porous medium with a free
surface. Karl S. Pister. pp 249.

Seepage in ditches in the case of a plane water table and
an impervious substratum. Don Kirkham. pp 425.

Model study of sand transportation along an infinitely
long beach. Thorndike Saville.,Jr., pp 555.

Laws of soil moisture. L. A. Richards. pp 750.

Minimum evaporation from water surfaces. N. W. Cummings.
pp 757.

Hydraulic influence of modifications to the San Dimas
Critical depth measuring flume. K. S. Bermel.
pp 763.

1951

A comparison of several heat mass transfer networks of
interest in water conservation.
Heinz F. Poppendiek and Myron Tribus. pp 49.

Most frequent particle paths in a plane. Hermann von Schelling.
pp 222.

The role of aquifers in water supply. Raphael G. Kazmann.
pp 227.

Seepage into drain tubes in stratified soil. Don Kirkham.
pp 422.

Porosity factor for lose of laminar flow through granular
media. Joseph B. Franzini. pp 443.

An improved soil moisture measuring unit for hydrologic
studies. R. E. Youker and F. R. Dreibelbis. pp 447.

Soil anisotropy and some field methods for measuring
permeability. Ronald C. Reeve and Don Kirkham.
pp 582.

The damping action of submerged breakwater. J. W. Johnson,
R. A. Fuchs and J. R. Mouson.

The problem of safe yield in insular Ghyben-Herzberg
    systems.   Chester K. Wentworth.   pp 739.

The relationship between sand size and beach face slope.
    Willard N. Boscom. pp 866.

Evaluation of the critical regime in stratified flow.
    A. Craya. pp 891.

On the origin of river meanders.   P. Wilh. Werner.   pp 898.

1952

The forces exerted by waves on objects. M. P. O'Brien
    and J. R. Morrison. pp 32.

On the storage of water in rocks in Situ.   V. L. Bosazza.
    pp 42.

A rigorous, simple, method of measuring and recording
    particle-size distribution in dispersed material.
    M. Rim.   pp 423.

Influence of capillary conductivity and depth of wetting on
    moisture retention in soil.   L. A. Richards and
    D. C. Moore. pp 531.

Some factors involved in ground water replenishment.
    E. S. Bliss and C. E. Johnson. pp 547.

Nonsteady flow to a well of constant drawdown in an
    extensive aquifer.   C. E. Jacob and S. W. Lohman.
    pp 559.

Most frequent particle path on the unit sphere.   Hermann
    von Schelling. pp 570.

*The efficiency of depth integrating suspended sediment
    sampling.   Ning Chien.   pp 693.

Accelerated motion of a spherical particle.   M. R.
    Carstens. pp 713.
